S3 Maritime to debut Hatteland 55" 4K UHD Chart and Planning Table Monitor at Seattle Boat Show

Most advanced maritime display system ever produced enables Integrated Bridge System manufacturers to develop new multi-data solutions.

SEATTLE – January 9, 2017 – If you're going to see one accessory at the Seattle Boat Show, this is it. When you stand in front of this very technically elegant display you are going to think you're on the bridge of the Starship Enterprise. Never before have you been able to display so much information on one screen and when you want to magnify one particular segment it is simply a matter of running your fingers over it.

The concept of a large 4K resolution Chart and Planning table was born out of a realization that maritime display technology evolution is vital to improving the effectiveness of modern bridge systems. As a 55" display, it provides the size needed to integrate system data in a single display, enabling Integrated Bridge System (IBS) and navigation technology manufacturers to combine multiple data from ship systems into a single, user-friendly system. Crucially the 4K resolution ensures that multiple data types can be easily viewed under all conditions.

This won't be for every boater however if you want to see the future this will be a great opportunity.

For more information or to make an appointment to see this display at Booth 2418 on the Electronics Concourse at the Seattle Boat Show, give S3 Maritime a call at 206-420-4932.

About S3 Maritime

S3 Maritime is your trusted source for complete yacht systems, service, and support. We are located at the Salmon Bay Marine Center in Ballard/Magnolia along the Lake Washington Ship Canal, but our services extend worldwide. Anything. Anytime. Anywhere.
